

DNA Paternity Testing ...

Fast, accurate, discreet paternity testing is readily available through Men's Rights Agency. The DNA Laboratories MRA uses are fully accredited by NATA.

There are two methods used in testing....

Peace of Mind Test (self sampling)

\$475 – testing for one man (putative father) and one child

Each extra child is \$150 each.

Known as a "Peace of Mind Test", sample mouth swabs are collected by the man from himself and the child, labeled and packaged, sent to Men's Rights Agency, together with the correct payment and the results will be known within a very few days.

"Peace of mind tests" do not satisfy legal requirements due to the method of self sampling i.e. without independent verification of identity of the persons involved, but the test is accurate and satisfies the "need to know".

Legal Requirement Test

\$600 – testing for one man and one child with the samples taken at a pathology laboratory to ensure verification of the samples and the identity of the people involved.

Extra Child \$150

Family law legislation requires that the DNA mouth swab samples are taken by an authorized pathology collection service and processed by a DNA Laboratory which has NATA approval. The mother's approval is also required for the Legal Requirement Test.

Some additional postage charges will be involved for overseas participants.

Men's Rights Agency only uses NATA approved DNA Laboratories.

Call 07 3805 5611 for more information or for a self-sampling mouth swab kit to be sent to you.

Approximately 25% of men tested find they are not the father of the child.

A man has a right to know if a child is hisand a child has a right to know, be loved and cared for by his biological father.
